The appearance of the anime is defined not only by the visual styles of the characters on the screen, including movement and clothing, but also by the worlds in which these characters live. Artists who want to become anime animators need to familiarize themselves with this unique cartoon style, as well as develop a comprehensive portfolio. Study different types and styles of anime. Exposure collected from sites like YouTube, Tokyopop, Facebook and Twitter links can get your material in front of the right people. Enroll in art school. While you may have a huge natural talent, using elements from formal art training takes your art to the next level. Schools in Japan, such as Kyoto Seika University, specialize in manga art, providing postgraduate and postgraduate courses. Western art schools, such as the San Francisco Academy of Arts, offer undergraduate and master's courses in arts and illustration. As in any art school, a well-rounded portfolio is a must. Benubird PDF is a great idea for document management, but it is plagued by some bugs and design choices. What Benubird PDF is not to take documents you have scattered on your hard drive (you say which folders to search in) and then copies all of them to one directory, gives them unique names (so 500 copies of copies readme.txt become 0001_readme.txt, 0002_readme.txt and so on) and then lets you sort and search them by file properties such as author, creation date, subject, etc. You can add categories to files and create folders that sort files by different rules— and the file can easily exist in multiple folders because they are categorical tools, not physical disk units. Sounds great, but there is no implementation. First, Benubird PDF does not make references to documents... copies the documents. This means that if you have, say, 100 gig document files that you want Benubird PDF to manage, you need an extra 100 gig of disk space. Secondly, this process is sloooooow. The My Documents folder contains about 60K files, and even limiting Benubird only to the file types I wanted to manage (PDF, DOC, TXT, XLS, and the like) meant waiting a long, long time to copy them. I eventually interrupted the process after about 5000 files were copied, but that was enough to test its features. For everything I liked, she was gotcha. Hey, cool, I can easily filter the list of files and then add properties. Hey, uncool, every time I bring up a dialog box to work with one of my filtered files, benubird PDF removes the filter, so I'm back to looking at the full list. Cool, Benubird PDF will view the folder, and when a file of a certain type is added to that folder, it will add it to its library. Uncool, marks the file as missing and no matter how often you point it back to the source file, it still claims that the file is gone. (It was. I checked.) Last, and it really isn't a criticism of benubird PDF out: To make the most of it, you should add categories to your files. It takes a long time if you have, say, 60,000 of them. Benubird PDF is free, which is good. There is a Deluxe non-free version coming, but it has not yet been released. Hopefully by the time they ask people to pay for it, the kinks will be worked out.--Ian Harac Note: When you buy something by clicking the links in our articles, we can earn a small commission.
